**BOLT  
RYEGRASS**

 **gentos**  
GENTE DE PASTOS

# 1

## Characteristics

### VARIETY

Annual-type ryegrass or Westerwoldicum.

### GERMPLASM

Diploid material selected in Argentina for hardiness and high advanced grass volume.

### DIFFERENTIAL FEATURE

Variety with a hyper-early cycle.

### STRUCTURE

Plants with thin to medium leaves and high density of tillers.

### PRODUCTION

Plantas de hojas finas a medias y alta densidad de macollos.

### GROWTH CURVE

High production and outstanding speed of regrowth.

### CYCLE TO FLOWERING

Early, with very good grazing tolerance.

### ZONE OF ADAPTATION

Productive areas of our country.

### PRODUCTIVE SEGMENT

Plants with early grass requirement in environments with limitations. Ideal as a first linkage of winter annual pastures.

### USE

Dairy or livestock farming. For animals with high requirements, or in short-term deferment.

## Ryegrass

### TECHNICAL APPROACH

- Pure: as annual for direct grazing or whole-plant silage.
- Very good adaptation to aerial seeding.

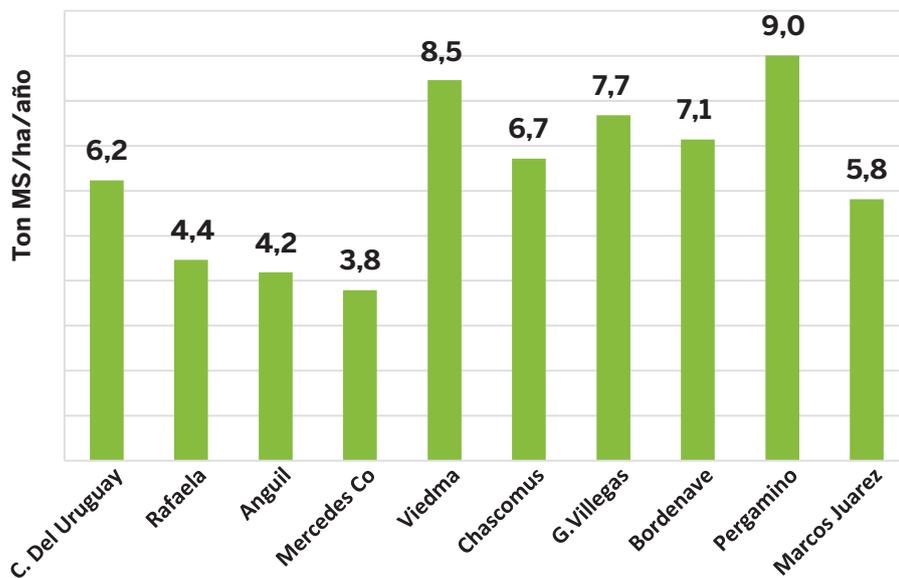

### SEEDING RATE (PURE):

In rows at 17.5 cm. Target: 500-800 plants/m<sup>2</sup>. Depending on the environment and the technical approach, 20-25 kg/ha.

earliness.

## 2 Average yield

Bolt - Average yield (2011-2016 Series).

RED INTA data, 6-year series.  
Multiple test locations.
