

**nitromax**

**NITROMAX  
VICIA VILLOSA**

 **gentos**  
GENTE DE PASTOS

# 1

## Characteristics

### CHARACTERISTICS

National genetic improvement. Good establishment speed and winter hardiness.

Prostrate habit when young, excellent ability to compete with tough weeds. 170-190 days to flowering (depending on area).

### ADAPTATION

Very good in all types of soil texture and chemical fertility. Winter hardiness and high drought tolerance.

Waterlogging-sensitive.

### SEEDING RATE

40-60 plants/m<sup>2</sup> as target. 20-25 kg/ha when pure, and 15-20 kg/ha when mixed.

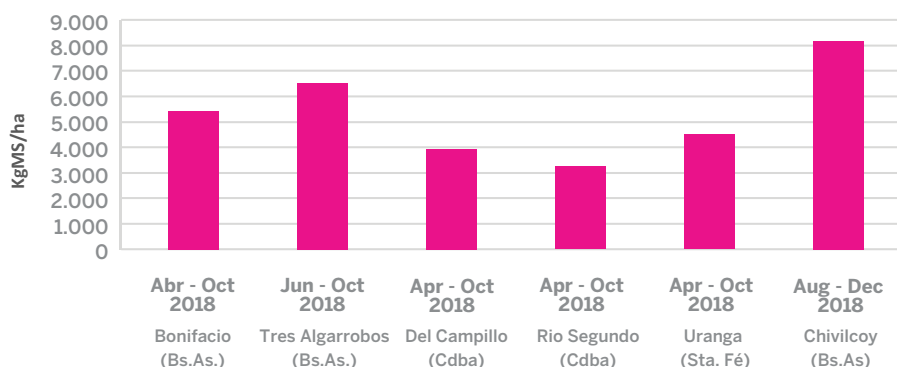

40-60  
plants/m<sup>2</sup>  
as target.

20-25 kg/ha  
(pure) and  
15-20 kg/ha  
(mixed)

# Nitromax Vicia Villosa

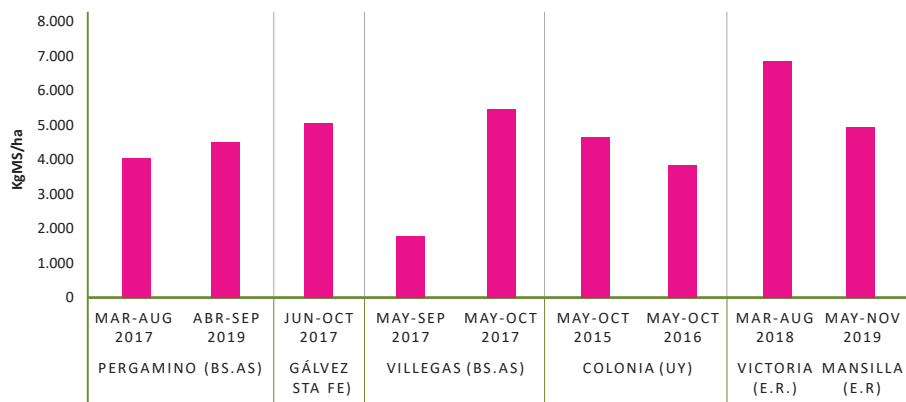

## Total cumulative production of NITRO MAX Vicia villosa – AAPRESID, 2018.

## RECOMMENDATIONS

- It adapts well to sub-optimal seeding dates (April-June).
- Better weed control when drilled than when broadcasted.
- Good response to roller chopping.

## Total cumulative production of NITRO MAX Vicia villosa.
